

Kool-Mist

After Flash Cool-Down Unit

Eng

Kool-Mist™

Kool-Mist applies a high-pressure atomized spray of water and food-grade silicone to cool down prints and minimize after-flash tack. Since Kool-Mist is used between the flash unit and the next printhead, it reduces the need for an open station after flash curing. Compact and portable, Kool-Mist is designed for use with nearly all of M&R's automatic textile screenprinting systems. A single proximity switch and mounting bracket makes it easy to integrate Kool-Mist with the press. Other features include submersible pump, digital microprocessor, digital operator interface, and programmable controls. Kool-Mist carries a one-year limited warranty.

Like all M&R equipment, Kool-Mist is built with M&R's unsurpassed commitment to quality, durability, and design excellence, and is backed by M&R's unparalleled service and support.

SPECIFICATIONS

| Model | Air @ 100 PSI | Electrical Requirements* | Shipping Weight |
|-----------|---------------|---------------------------------|-----------------|
| Kool-Mist | 3 cfm | 110v, 1 phase, 5 amps, 50/60 Hz | 100 lbs (46 kg) |

* If incoming voltage differs from the voltage(s) listed, calculate amperage accordingly

* Other electrical configurations available: Contact M&R for details
